Introduction:

As part of an annual commitment toward monitoring and evaluation of refuges, this document summarizes conditions observed at Wesquage Pond Wildlife Refuge observed on June 26, 2019.

Complete property details are contained in the 2018 Current Condition Report in the Appendix.

General Description:

Wesquage Pond is a 65-acre ± barrier pond located within the Bonnet Shores Fire District. The Wesquage Pond Wildlife Refuge was acquired in five tracts and consists of most of Wesquage Pond as well as vacant lots north of the pond.

Disclaimer:

The observations and monitoring notes from June 26, 2019 summarized here, represent visible conditions. It is possible that some features will have been undetected because of vegetation or other conditions.

Parcels were monitored to the best of my ability using existing maps (Appendix Figure 3). Many of the northern parcels are disjunct and were platted as “paper lots” but never developed. Still, procedures were replicated from the 2018 monitoring summarized in the 2018 Current Condition Report.

Observations:

After walking most perimeters and driving some—where walking was not safe—I could not detect negative changes to refuge conditions since the prior monitoring in 2018 (Appendix). There were no obvious human activities such as trails, dumping of inorganic matter or piles of yard waste. In fact, the wooded thicket and small woodland on the northeast corner of Wesquage Pond looked better than 2018 where we detected some yard waste and small human trails just beyond the end of Lake Street.

Six predated turtle nests were detected in the raised sandy shore along the rip-rap edge of the Wesquage Pond inlet. I reported this observation to RI Department of Wildlife Management Wildlife Biology program, tracking Rhode Island’s reptiles and amphibians.

Acreage:

81.5 acres ±

Introduction:

This document is a description of land owned by the Audubon Society of Rhode Island. This report describes in general terms the vegetation and wildlife observed on the property during a survey conducted on April 18, 2018.

General Description:

Wesquage Pond is a 65 acre ± barrier pond located within the Bonnet Shores Fire District. The Wesquage Pond refuge was acquired in five tracts and consists of most of Wesquage Pond as well as vacant lots N of the pond.

The Belton Tract, Parcel 1 was donated to the Audubon Society of Rhode Island on September 2, 1971 by the Belton Corporation. Included in the deed were specific restrictions to housing development on the land adjacent to the pond (see deed for detail).

The Belton Tract, Parcel 2 was donated to the Audubon Society of Rhode Island on December 18, 1974 by the Belton Corporation with no legal restrictions (see deed for detail).

The combined acreage of the Belton Tract parcels is 68 acres ±.

The Cardi Tract was donated to the Audubon Society of Rhode Island on December 22, 1993 by Roland (Ron) P. Cardi, Nicholas Cardi, Jr., Peter D. Cardi, Arthur Zompa, and Sandra Zompa. This tract consists of vacant house lots to the NW of Wesquage Pond and totals 9.2 acres ±. There are no legal restrictions stated in the deed (see deed for detail).

The Corona Tract was donated to the Audubon Society of Rhode Island on December 20, 1984 with no restrictions stated in the deed. This tract totals 3.23 acres ±.

The Francisco Tract was donated to the Audubon Society of Rhode Island on December 21, 1981 by Mary V. Francisco. There was some confusion regarding Mrs. Francisco's ownership of this parcel due to her husband, Pasco Francisco, being the only name on the deed. According to ASRI records, the Francisco's assumed that the entirety of Mr. Francisco's estate would be transferred to Mrs. Francisco and no challenges had been made to the will (see Property Record Form filed at ASRI headquarters, Smithfield, RI). The Francisco tract totals 0.1 acres ±.

Topography and Hydrology

Elevations of the Wesquage Pond refuge range from approximately sea level to 50 feet above sea level. The highest elevations are found at the NW of the property at the end of Clara Lane and Lily Lane. The landscape slopes downward from approximately W to E to Wesquage Pond and then rise to the E again. The lowest elevations are found to the SE at Wesquage Pond (Figure 4).

Two unnamed streams run through the property from approximately NW to SE, join to the NW of Wesquage Pond, and connect to the pond at Lake Road (Figure 2 and Figure 4).

Vegetation and Wildlife Value

The species listing below is only a partial list to provide a baseline of the more common species present at the time of this survey. The property likely supports diverse flora and fauna throughout the year not observed during these surveys.

Table 1. Vegetation observed on the Wesquage Pond refuge on April 18, 2018. (Species in **bold** are listed as invasive by the USDA National Invasive Species Information Center (NISIC)¹ and/or are listed in the Invasive Plant Atlas of New England²).
